

CROSSCHAIN DEFI · SWAP · FARM · BRIDGE · NFT MARKETPLACE

Problems with firstgeneration DeFi tokens

Challenges and Risks

- 1. Lack of regulation and compliance;
- 2. Legal uncertainty and risks for users;
- 3. Frauds and Ponzi schemes disguised as legitimate projects;
- 4. Lack of transparency and adequate information for investors;
- 5. Limited interoperability between DeFi protocols.

Solutions

StrongHands Finance can be a game-changer with its multichain system and bridges. Our solution offers key improvements compared to the first generation of DeFi.

- 1. Increased liquidity: Our DEX connects multiple blockchains, aggregating liquidity and enabling seamless swaps;
- 2. Enhanced scalability: With a multichain system, we distribute loads across blockchains, overcoming scalability limitations;
- 3. Access to different ecosystems: Users can trade assets from various blockchain ecosystems, expanding opportunities;
- 4. Reduced security risks: Our secure bridges leverage underlying blockchain security, mitigating vulnerabilities;
- 5. Flexibility and choice: Users select their preferred blockchain based on security, scalability, fees, and asset ecosystems.

StrongHands Finance Token

ISHND is the finance utility token of StrongHands
BlockChain Ecosystem. It was designed to be a
turning point on DeFi, bringing 1st generation coins
into the ecosystem, collateralizing with tokens
available in StrongHands Finance Swap Platform. It
will offer many dApps and low fees to diversify
investment in the decentralized economy.

ISHND will have an important role balancing the whole ecosystem and creating liquidity for all projects listed. Also, it provides rewards and passive income in different coins and tokens.

Platform is being architected to become faster and clearer for users, paying fair APR staking and farming iSHND, as well as other tokens. The differential concept already established is meant to be the turning point of our project: the CrossChain/MultiChain platform, which will allow users to switch chains whenever they like from BNB Chain to ETH, TRX, SOL, Polygon and others.

The achievement of such a possibility is to integrate iSHND and turn it into a agile and reliable tool, avoiding common issues like blockchain congestion and high gas pricing.

Platform Pillars

DEX

Our liquidity pool is a smart contract that contains funds contributed by liquidity providers, which are then used to facilitate trades between different assets.

Liquidity providers earn a share of the trading fees generated by the pool based on their contribution, and our pool's automated market maker algorithm adjusts the asset prices based on supply and demand to maintain balance.

By staking iSHND you will be enabled to take participation in many pools receiving dividends by only locking your tokens, users can withdraw them whenever they like.

BRIDGE

StrongHands cross-chain bridge has an advanced mechanism that allows assets to be transferred between different blockchains by locking the assets on one blockchain and creating a representation of those assets on another blockchain, enabling users to transact between the two blockchains. Currently it is possible on BNB Chain, Ethereum Network and Polygon.

The bridge is operated by a set of nodes that verify and validate transactions before releasing the assets on the other side of the bridge using relayers to ensure the tokens will received from one chain to another.

NFT MARKETPLACE

Our marketplace is a platform that allows users to buy, sell, and trade unique digital assets, known as non-fungible tokens (NFTs). You can even buy our Manekin-Nekos, our adapted symbol of Japanese prosperity paying homage to our first community.

It operates now on a Ethereum blockchain, and provide a way for creators to showcase and monetize their digital creations, while allowing collectors to discover and acquire unique NFTs. It is a great and reliable platform under development and is being prepared to be multichain.

Increased liquidity

Our project has been started on BNB Chain, however, due to the increased necessity to aggregate more chains, we plan to develop it in Ethereum Network and Polygon according our Roadmap with the usage of concentrated liquidity as Uniswap V3.

Enhanced scalability

The development of the bridge system is continuous, we today have BNB Chain, Ethereum Network, Polygon, Tron and we will continue developing to promote fast transactions using 1:1 parity among chains.

Access to different ecosystems

Our bridge will be promoted in a way any project can be integrated. Any project working in more than one chain can be listed to use our ecosystem.

Reduced security risks

Our Dex, Bridge and NFT Marketplace are security protected by multilayers using multisig addresses to protect all contracts at Safe App as well as strong firewalls allocated in our own servers.

Flexibility and choice

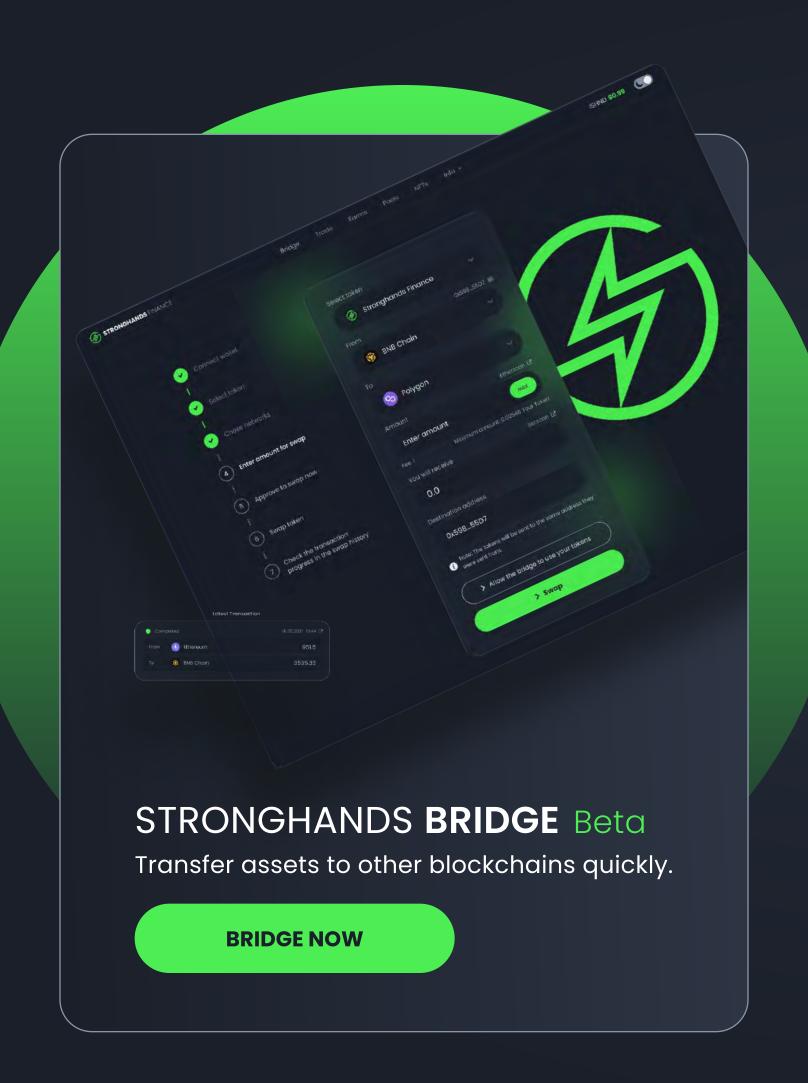

Our dex promotes freedom of choice where projects can create LPs and increase liquidity easily locking them or not. We revert 84% or fees generated to liquidity providers being one of the best choices from market. The other 16% goes to staking pools.

STRONGHANDS FINANCE

Q2 Roadmap

- OEX beta launch with staking and LP integration
- OEX integration with Coingecko and Coinmarketcap
- Partnerships with Projects on BNB Chain

STRONGHANDS © 2023

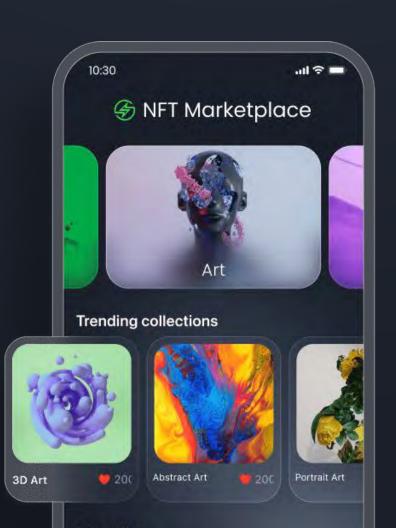

Roadmap

Quarter 3

- DEX integration on ethereum network
- NFT marketplace integration on polygon network
- Partnerships on Ethereum network
- Partnerships on Polygon network
- Developments on more networks for bridge and DEX
- SHMN new wallets
- SHND new working plan

Quarter 4

- DEX integration on polygon network
- DAO discussion with community
- DEX and Bridge further integration with new networks
- Al future developments for DEX trading

Team & Partners

We are building a solid and great project with a multi-task experienced development team, developers and partners who are experts in smart contracts, applications and security.

OUR PARTNERS

Bitmedia.

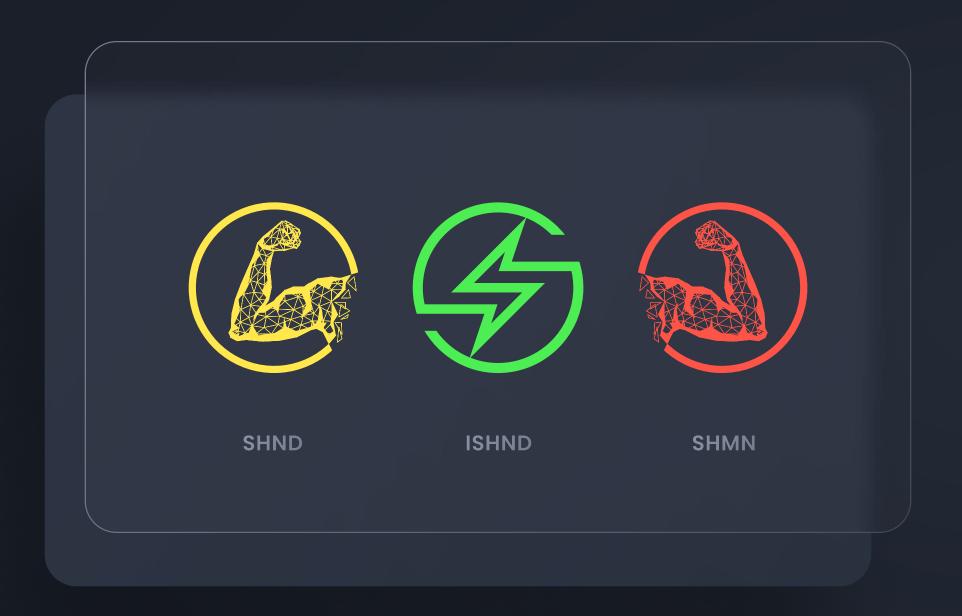

STRONGHANDS FINANCE

Future of StrongHands

ISHND borns to bring equity and liquidity to the whole StrongHands ecosystem. Our talented Team and the vibrating community will guide the future of StrongHands by constantly pursuing the cutting edge of technology. Our purpose is to bring people dignity, wealth distribution and a pulsating decentralized economy.

The development fund will sponsor the steady growth of our existing chains, and constant marketing to increase the volume of capitalization of all currencies in the SHND ecosystem.

- Original yield farming and staking platform (under development);
- Fast bridge swap site aggregating important networks such as Ethereum, Polygon and Tron (phase 1), Avalanche, Solana and Pulsechain (phase 2);
- Development of a multichain NFT Martketplace which will allow users to buy/sell items, auction, making offers and even mint them;
- Fullnode Clusters and DNSSeeds to bring stability and speed to the chains;
- New GUI Wallets (FUllnode QT Wallets and RPC NodeJs wallets);
- SHND and SHMN chain revision;
- Integrations with Web3.
